

Peter's Corner presents "Winds of Change"

Examining Claims about Global Warming /Climate Change

<http://hudsonctv.com/CablecastPublicSite/search?channel=1&query=winds>

(Note: Parts are in reverse order; Part VII appearing first; and Part II is preceded by Part I)

Part I: Host Peter Lanzillo and Joe D'Aleo in *CO2 the 'Demon Gas'* showed how the demonized CO2 is a trace gas, just 0.04% of our atmosphere. We showed evidence how it has little effect on temperatures but instead is a highly beneficial gas. It is a plant fertilizer that has greatly greened the planet and increase crop yields 3 to 5 fold. CO2 combines with water, nutrients and sunlight to grow plants through photosynthesis. We pump CO2 into greenhouses. As for it being a harmful pollutant, every breath you take emits 100 times more CO2 than the air you took in.

Part II: Host Peter Lanzillo and Joe D'Aleo in *Taking the Earth's Temperatures* showed the many issues in attempting to assess what is happening globally. 75% of the global stations were dropped after 1990, up to 90% of the remaining stations have missing months each year, a large percentage of the stations are now not properly sited. Oceans cover 71% of the globe and full accurate global coverage was not achieved until 2004. Dodgy models are used to adjust temperatures. Yet we claim we can assess global temperatures to hundredths of degrees.

Part III: Host Peter Lanzillo, Joe D'Aleo and Michael Sununu in *Weather Extremes - the Real Story*, we showed though after Hurricane Katrina in 2004, scientists (and Al Gore) predicted devastating storms would be the 'new normal'. Yet since 2005, we have this week surpassed 4300 days without a major hurricane making landfall in the U.S. (more than double the 19th century record). The annual number of strong tornadoes are decreasing. There is no change in flood or drought frequency. Sea level rise globally has slowed to a 4 inch/century rate while models and the movie suggested changes in meters. Polar ice is just going through normal cyclical changes.

Part IV: Host Peter Lanzillo and Joe D'Aleo In the *Real Natural and Man-made Causes of Climate Change*, we show how El Niño and La Niña cause warming and cooling and how decadal ocean basin cycles lead to a tendency for one or the other to dominate and lead to decadal temperature trends. We looked at the sun, which the climate models ignore, and show how solar cycles and the different solar outputs affect the climate and likely drive land and ocean temperature cycles. Volcanoes have a very strong affect but it tends to be shorter term. Man's primary influence is through land use changes most specifically urbanization.

Part V: Host Peter Lanzillo, Joe D'Aleo and Michael Sununu looked at the *Energy at Risk* story. We showed how we here in New Hampshire and

the northeast pay, along with California, the highest electricity prices in the nation because of bad policies and how the Paris Accord — by driving the costs of energy to high levels — would devastate our nation's economy and hurt the poor and middle class and those on fixed incomes the most. We looked at current plans with special focus on Wind Energy.

Part VI: Host Peter Lanzillo, Joe D'Aleo were joined by NASA sea level expert Tom Wymuller and Professor Larry Gould. In **Isn't the Sea Level Rise a Sea Level Ruse?**, Tom Wymuller confirmed the linear-unchanging & no-sign-of-acceleration of sea level rise globally — in contrast to all models and claims — and addressed the beneficial nature of CO2.

Part VII: Host Peter Lanzillo was joined by Joe D'Aleo, Tom Wymuller and a college professor, Dr. Laurence I ("Larry") Gould. In **Critical Thinking about Dangerous Anthropogenic 'Climate Change/Global Warming'**, Larry talked about how — by committing errors in elementary logic as well as by appealing to "authority", "consensus", and "code words" — schools, government, and the media have been indoctrinating our young people and the public to support harmful and unnecessary policies.
