## What the Adminstration and Environmentalists Don't Want YOU to Know

## By Ed Blick

The U. S. Geological Service issued a report in April 2008 that only scientists and oil men knew was coming, but man was it big. It was a revised report (hadn't been updated since 1995) on how much oil was in this area of the western 2/3 of North Dakota, western South Dakota , and extreme eastern Montana ..... check THIS out:

The Bakken Formation was deposited in the more central and deeper portion of the Williston Basin.

Source: USGS

The <u>Bakken</u> is the largest domestic oil discovery since Alaska's Prudhoe Bay, and has the potential to eliminate all American dependence on foreign oil. The Energy Information Administration (EIA) estimates it at 503 billion barrels. Even if just 10% of the oil is recoverable... at \$107 a barrel, we're looking at a resource base worth more than \$5.3 trillion.

"When I first briefed legislators on this, you could practically see their jaws hit the floor. They had no idea." says Terry Johnson, the Montana Legislature's financial analyst.

"This sizable find is now the highest-producing onshore oil field found in the past 56 years," reports The Pittsburgh Post Gazette. It's a formation known as the Williston Basin , but is more commonly referred to as the 'Bakken.' It stretches from Northern Montana, through North Dakota and into Canada. For years, U. S. oil exploration has been considered a dead end. Even the 'Big Oil' companies gave up searching for major oil

wells decades ago. However, a recent technological breakthrough has opened up the Bakken's massive reserves.... and we now have access of up to 500 billion barrels. And because this is light, sweet oil, those billions of barrels will cost Americans just \$16 PER BARREL!

That's enough crude to fully fuel the American economy for 2041 years straight. And if THAT didn't throw you on the floor, then this next one should - because it's from 2006!

U. S. Oil Discovery- Largest Reserve in the World - Stansberry Report Online - 4/20/2006

Hidden 1,000 feet beneath the surface of the Rocky Mountains lies the largest untapped oil reserve in the world. It is more than 2 TRILLION barrels. On August 8, 2005 President Bush mandated its extraction. In three and a half years of high oil prices none has been extracted. With this motherload of oil why are we still fighting over off-shore drilling?

They reported this stunning news: We have more oil inside our borders, than all the other proven reserves on earth. Here are the official estimates:

- 8-times as much oil as Saudi Arabia
- 18-times as much oil as Iraq
- 21-times as much oil as Kuwait
- 22-times as much oil as Iran
- 500-times as much oil as Yemen
- and it's all right here in the Western United States .

HOW can this BE? HOW can we NOT BE extracting this? Because the environmentalists and others have blocked all efforts to help America become independent of foreign oil! Again, we are letting a small group of people dictate our lives and our economy.....WHY?

James Bartis, lead researcher with the study says we've got more oil in this very compact area than the entire Middle East - more than 2 TRILLION barrels untapped. That's more than all the proven oil reserves of crude oil in the world today, reports The Denver Post.

Don't think ' OPEC' will drop its price - even with this find? Think again! It's all about the competitive marketplace, - it has to. Think OPEC just might be funding the environmentalists?

Got your attention yet? Now, while you're thinking about it, do this:

Pass this along. If you don't take a little time to do this, then you should stifle yourself the next time you complain about gas prices – by doing NOTHING, you forfeit your right to complain.

Now I just wonder what would happen in this country if every one of you sent this to every one in your address book.

By the way...this is all true. Check it out at the link below!!!

GOOGLE it, or follow this link. It will blow your mind.

P.S.

By the way we have a tremendous amount of Coal. Using the Fischer-Tropsch technology. We can make oil from coal when oil prices exceed \$64 per barrel. All German aircraft in WW II were operated on gasoline refined from this type of oil.

In 70 years (1860-1930) America went from living like "Little House on the Prairie" (horse & buggy, out houses etc) to planes, trains, automobiles, modern medicine (X-rays, electric dental drills, etc), water pumped into our homes, flush toilets, electric lights etc....because of oil and coal. Oil & Coal are extremely high density forms of energy. One ounce of coal can pull one ton of coal in a railroad car two miles. Oil has twice the energy density and it can pull the one ton four miles!

Two years ago, Obama promised to bankrupt coal companies and sky-rocket electric rates. Half of our electricity is generated by burning coal.

Forget the puny amount of energy from Wind Mills and Solar Panels....they are NOT able to POWER AMERICA. Trying to do so is pouring money down a rat hole!
